EDUCATION

KAIST

B.S. in Computer Science, GPA: 3.75/4.30, CS GPA: 3.88/4.30

Daejeon, South Korea

Mar. 2021 – Feb. 2027 (Expected)

- Member of **RUN**, KAIST Algorithmic Problem Solving Club.
- Studies interrupted for mandatory military service, Feb. 2023 to Aug. 2024.

SKILLS SUMMARY

Technical Skills: C/C++, Rust, Python, Git/GitHub, CI/CD

Languages: Korean (native), English (working proficiency)

EXPERIENCE

Nari Labs

San Francisco, United States

Founding Engineer

Sep. 2025 – Jan. 2026

- Worked as a founding engineer at a YC F25 startup building a highly human-like, low-latency speech-to-speech model.
- Designed and implemented API architecture for real-time speech-to-speech inference, focusing on minimizing end-to-end latency.
- Built backend systems in Rust and used Redis for low-latency state management and request coordination.

PROJECTS

Comparative Analysis of Filesystem Behavioral Features among Ransomware, Benign Programs, and Encryption Programs [Link]

Mar. 2026 – Present

- Conducted a KAIST Computer Science Project and wrote a research manuscript critiquing the reproducibility of Guo et al.'s RansomRadar ransomware-detection pipeline.
- Reproduced and modified the Python-based pipeline combining KNN encryption detection with LSTM temporal-correlation detection over hardware performance counters and file I/O behavior.
- Built a controlled dataset from ransomware, benign programs, and encryption programs, then added filesystem behavior and write-entropy features to improve model robustness.

KENSv3 [Link]

Mar. 2026 – Jul. 2026

- Implemented an educational network system in the KAIST Introduction to Computer Network and Lab course.
- Built core TCP socket behavior in C++, including POSIX-style system calls, packet handling, connection setup, teardown.
- Implemented reliable data transfer with flow control, retransmission, recovery over unreliable channels, and congestion control.

MAGNet [Link]

Sep. 2024 – Nov. 2024

- Developed an image super-resolution model for the KAIST Introduction to Artificial Intelligence course.
- Combined ESRGAN's perceptual GAN-based reconstruction with Meta-SR's arbitrary-scale upsampling approach in PyTorch.
- Evaluated the combined model against ESRGAN and Meta-SR baselines and showed improved super-resolution performance.

HONORS AND AWARDS

- Round 2, **Google Code Jam 2019** May 2019
- 5th Prize, **Union of Clubs for Programming Contest (UCPC) 2024** Aug 2024
- Finals, **Samsung Collegiate Programming Cup** Sep 2024
- 39th Place, **International Collegiate Programming Contest (ICPC) Seoul Regional 2024** Nov 2024
- 5th Prize, **Union of Clubs for Programming Contest (UCPC) 2025** Jul 2025
- Finals, **Samsung Collegiate Programming Cup** Sep 2025
- Candidate Master (Max Rating 2064), **Codeforces** [Link]
- Diamond IV according to **solved.ac** / Baekjoon Online Judge [Link]
